institution: IliaUni, Tbilisi

date: October 22, 2019

lecturer: Prof.-Dr. Ulrich Hauser-Ehninger

1. Use `apropos` and `man` to find out, how to print the date in the form YYYY-MM-DD to the console.
2. Use `apropos` and `man` to find out, how to delete a non-empty directory with a single command.
3. Use `apropos` and `man` to find out, how to find all files following the pattern `*.cfg`. The files found shall be listed, each file in a separate line and enclosed in single quotes (`'`).
4. Write a file `~/apple` with the content `This apple is sour`.
5. Append `But I like it` to the file `~/apple`.
6. Copy all files in your account which start with `x` into the directory `~/theExes`. This directory is assumed to exist.
7. Create a file `rights` in your home directory and assign the permissions `777`. Remove the permission to execute for the group without using the octal way to change permissions.
